EDUCATION

University of Michigan

Bachelor of Science in Engineering, Computer Science

Ann Arbor, Michigan

May 2024

SKILLS

Languages: C#, Python, TypeScript/JavaScript, Rust, Go, SQL, C/C++

Backend & Cloud: .NET, Node.js, GCP Pub/Sub, Orkes, Kafka, AWS, Azure, Cloudflare Workers, Postgres, Docker

Frontend: React, Next.js, SvelteKit, Tailwind CSS, WebGL/GLSL

AI/ML: Claude Agent SDK, LLM structured outputs, embeddings & vector search (CLAP, ONNX, pgvector), PyTorch

Spoken: English (native), Spanish (native), Portuguese (intermediate)

EXPERIENCE

United Wholesale Mortgage

Software Developer I

Pontiac, Michigan

Jan 2025 – Present

- Building 3 greenfield loan-servicing applications (C#/.NET, React/TypeScript) on event-driven GCP Pub/Sub and Orkes workflows; shaped requirements through user interviews with servicing staff.
- Serve on the Servicing IT developer council, defining and enforcing code standards across the team.
- Built automated data-point extraction from insurance documents on Bolt, UWM's internal AI mortgage platform, processing 4,000+ documents a day across ~2,000 loans to feed auto-underwriting and cut manual review.
- Migrated ~800 feature flags from CloudBees to Harness as part of a 4-month team initiative.

Glenbrook Trading

Quant Algorithm Developer

Remote

Jun 2024 – Present

- Architected the firm's backtesting platform (C#, Python, React/Next.js) on a team of ~5: replays a year+ of nanosecond-precision market data across multiple symbols and runs portfolio simulation.
- Modeled slippage, commissions, fees, and latency into reported P&L so backtests reflect live trading conditions.
- Built live CME connectivity for both order routing and market data, so strategies can fire on demand against the real exchange rather than a simulated venue.
- Built AWS infrastructure from S3 storage through model serving and live monitoring; Dockerized the engine and wrote implementation specs for interns.

Zoox

Automated Driver / Software Operator

Miami, Florida

Oct 2024 – Jan 2025

- Ran autonomous-vehicle test operations in downtown Miami; logged and triaged telemetry with engineering to capture edge cases.

MSH – AEON Software Division

Technical Product Management Intern

Fort Lauderdale, Florida

Jun 2023 – Aug 2023

- Shipped a generative-AI feature that personalizes interview questions in a hiring SaaS; built Testim.io test automation, including CAPTCHA flows.

PROJECTS

smpl – Semantic Sample Search | Rust, ONNX, CLAP, Tauri

2026 – Present

- Local-first CLI/TUI, with a Tauri desktop GUI in progress, that searches audio sample libraries by description (“punchy dark kick, short tail”) using CLAP audio-text embeddings run offline via ONNX; 13k+ lines of Rust, 500+ tests.
- Search by similar sounds, hear each sample instantly as you scroll through results, automatic pitch and key detection, Ableton Drum Rack generation from a one-line description, and drag-and-drop straight into your DAW.

Carpool – Voice Agent Runner for CarPlay | TypeScript, Claude Agent SDK, Cloudflare

2026 – Present

- Dictate coding tasks from the car: a Mac daemon runs each in an isolated git worktree via the Claude Agent SDK and reports back with a two-sentence spoken summary.
- Relay on Cloudflare Workers + Durable Objects over WebSockets; a PreToolUse hook enforces per-task permission presets on every tool call.

Universal Shader Tool | React, TypeScript, WebGL

2026

- Node-graph GLSL editor with a compiler (type resolution, topological sort, codegen) across 30 node types and live WebGL recompile; HTML/JS/TSX exports verified by pixel-parity browser tests (525 tests).

Quietly Build | Next.js, Supabase, PartyKit

2026

- Launched a ritual-based productivity PWA (quietly.build) with real-time co-working presence over WebSockets and a D3 force-directed idea graph.
